Solid: Actively Recording.  
Flashing: SOS Alarm Triggering.  
LED Off: Recording stopped.

#### Celluar

Solid: Device has GSM Connection.  
Flashing: Establishing GSM Connection.

## 2 Wiring Diagram

1- RED (power): permanent live power. supports from 10vdc up to 30vdc

2- BLACK (gnd): ground/earth/chassis

3- WHITE- (din1): dedicated input for ignition detection. must be connected to the ignition wire or an accessory that receives power with the ignition.

4- WHITE&YELLOW (dout1): provides negative signal output when activated. can be used to control external devices using a relay. the relay must be used to convert the negative signal to positive (e.g. starter motor cut-off). digital output can be activated or deactivated remotely by using the "send command" section on gpslive.

## 3 Installation

We recommend the installation to be carried out by a professional auto electrician. The device should be connected to a permanent live feed.

Ensure the dashcam is fitted the correct way. The LEDs should be facing the inside of the vehicle.

## 4 Functionality

The camera will power on when the vehicles ignition is turned on. It will automatically begin recording without any input.

The SOS Button which is positioned on the side of the device will trigger an SOS event. The camera will automatically capture, save and upload the events footage to GPSLive.

The camera is designed to be almost fully autonomous. All features can be accessed from GPSLive, simply follow the instructions in step 14.

## Accessing your footage

To access your footage, navigate to the Media tab, found along the top of the GPSLive home page. You'll be presented with 3 options, Video Library, Request Video and Live Stream. Video Library shows saved clips, Request video allows you to request a video from a specific time and date and Live stream allows Live Monitoring of the camera.
